

- 1 Start engine on Diesel
- 2 Run for about five minutes then switch to Veggi Oil
- 3 A minute before shutdown, switch to Diesel fuel

Usually the best place to fill up on Veggi Oil is at an oriental resturant; they tend to keep their oil the cleanest.

Operating Instructions

Veggi Tdi

What's What

- 1 **Separate fuel tank** to store the veggi oil. Should include a particle filter so that no harmful material works its way into the engine.
- 2 **Heated fuel lines** are needed so the oil doesn't coagulate in the cold (think how cooking grease hardens, and imagine it happen- ing inside your engine!)
- 3 **Fuel line switch** to go from Diesel to Veggi Oil or back.
